Retirement of Internet Explorer 11!

Internet Explorer will officially retire on 15th June 2022; meaning that it will be out of support and permanently disabled. Following this date, all users of the desktop application will be redirected to Microsoft Edge instead. Eventually, Internet Explorer will be entirely disabled via a Windows Update.

We have put together a step by step guide for you on how to move your data from Internet Explorer to Microsoft Edge. - For more information [Click here](#).

Let's grow our businesses together

If you're interested in giving your feedback on the service and products we provide, with the opportunity to be involved in a joint PR campaign, contact the sales team:

unleash the potential
of your business
systems!*

Minster's new recruits!

Minster's team has continued to grow this quarter as we have welcomed two new faces. Simon, who previously worked at Minster, has returned after a short break. He has been looking after, designing and implementing IT systems for over 25 years.

He has taken on the role of Senior Consultant, in addition to joining the management team. Liam, has joined our infrastructure team as a 2nd line engineer, with almost 5 years of experience under his belt.

Welcome to Team Minster Simon and Liam!

Get Data Smart with Microsoft's Power BI

Unleash the potential of your business with the ability to gain a complete overview of your critical data...

Power BI is an interactive data visualization software, developed by Microsoft, with a primary focus on business intelligence. The application has the ability to turn unrelated data sources into visually immersive and interactive insights that are readily available via a desktop app, on the web or on your mobile device!

You can save yourself a great deal of time and hassle whilst using Power BI as your dashboards will update in real time; giving users the ability to solve problems and identify opportunities as soon as they arise. Whether that means monitoring your stock levels, tracking your sales across a monthly period, or gaining an insight into the amount of calls or jobs that are currently waiting to be managed.

There are over 120 platforms and software that can be integrated within this system, from all MS office products such as Excel, to google analytics and CRM systems.

Get in touch with our team for more information about how Power BI can transform your way of working!
